

Enclosure to the application for Swedish Institute Scholarships for master's level studies in Sweden starting academic year 2026/2027

CURRICULUM VITAE TEMPLATE (Instructions)

To be eligible for an SI scholarship you must provide a CV in your scholarship application.

- The CV should only contain relevant information about your experience and background in accordance with the categories and headings in the template.
 - You may not alter the formatting of the template nor create new categories or headings in the template. **Alterations will render your application ineligible.** However, you may delete headings/entries you do not need. (See below.).
 - Fill out separate entries for each experience/degree/network engagement/scholarship as needed under each of these categories. Delete any headings or entries you deem unnecessary according to your situation. You can add entries (except under the category “work experience”) as long as the CV does not exceed 3 pages.
 - All entries under each category must be in reverse chronological order, starting from the most recent.
 - The completed CV may **not exceed 3 pages**. Any pages exceeding the maximum will not be considered.
 - The completed CV should be converted into PDF format before you upload it in the application portal. Do not include this instruction page when converting into a PDF document.
 - Do not attach any annexes to the CV. Any other annexes will be disregarded.
 - If you are using a Mac computer and are unable to click on the drop-down lists, try filling out the CV on a PC instead.
-

	 26, Long Hung 3, Vinhomes Thang Long, Hanoi, Vietnam, 100000  +84919903729  +84919903729  minh91@proton.me  Sex M  Date of birth 2001-07-18  Citizenship Vietnamese

WORK EXPERIENCE

[Fill out separate entries for each experience/employer. Start from the most recent. [Maximum 3 entries](#). Remove any headings and entries left empty.]

09/2025 – Present	Fullstack Software Engineer Nordic Education Platform - Beta (ODIN: Optimal Decision Intelligence Network) – Hanoi, Vietnam - Built a security-first backend on Supabase (Postgres/Auth/Storage + row-level security) with role-based access (student/parent/advisor/admin), consent flows, and strict separation of sensitive academic & behavioral data, ensuring secure handling of sensitive data and compliance-minded system design. - Increased application robustness by implementing CI/CD + monitoring/tracing + automated tests using GitHub Actions/Sentry/OTel, improving reliability and speeding incident diagnosis/repair (MTTR), aligned with building dependable, resilient systems. - Implemented ODIN’s modular multi-model routing layer and evaluation hooks (versioned prompts/decision flows, fixed test cases) to optimize latency/cost without sacrificing output quality, as part of building an LLM-powered system with metrics, evaluation, and assessment methods in mind. Industry/Sector EdTech Brief description of organisation Nordic Education Platform (Beta) is an AI-native guidance system built to ensure no Vietnamese student is left behind in the era of AI and automation. Powered by ODIN (Optimal Decision Intelligence Network), it combines student profiling, document intelligence, and future labor-market signals to provide personalized support and career guidance, especially for students who lack access to high-quality counseling. The platform is designed with security and trust at its core (role-based access, protected student data), and directly supports the UN Sustainable Development Goals by expanding equitable access to future-ready education pathways for Vietnamese learners navigating rapid technological disruption.
06/2024 – Present	Fullstack Software Engineer FPT Software – Hanoi, Vietnam Main Responsibilities: Deploy and develop new technical and business features for client’s internal research software, used to run data analysis algorithms for asset failure prediction and survival analysis. - Delivered requirements across 18 months/2 phases; directly liaised with client to translate client needs into implementable specs and shipped 33 requirements with clear acceptance criteria, technical documentation & traceability (audit-friendly change control). - Implemented Microsoft Azure SSO + JWT verification + RBAC/claims for application, enforcing least-privilege access and secure handling of sensitive data across client organization. - Enhanced application resilience and observability by integrating automated tests within Jenkins CI/CD pipeline (~75% test coverage) and monitoring/logging/tracing using Sentry/OTel/Splunk. - Optimized application’s database design and data analysis algorithm logic, resulting in 1.5x – 6x performance increases for frequent intensive database and data analysis operations (bulk insert/delete, Weibull statistical models) involving 260000+ assets. - Enabled sustainability outcomes by supporting critical data-driven maintenance decisions linked to a ~20% reduction in premature asset failure/waste (client-reported), and ensured auditability by documenting assumptions, data lineage, and decision logic for review and compliance. Industry/Sector Technology & IT Services Brief description of organisation FPT Software is part of FPT Corporation, a technology and IT services provider headquartered in Vietnam, with over 33000 employees in 30 countries. The company aims to be a leader in promoting digital transformation by delivering services and products to global clients in key sectors (Healthcare, Education, Manufacturing, Utilities...).

EDUCATION AND TRAINING

[Fill out separate entries for each degree/course. Start from the most recent. Remove any headings and entries left empty.]

07/2025 – 09/2025 Datacamp Career Track – Associate AI Engineer for Developers

FPT Software – Hanoi, Vietnam

- Selected for the department's first pilot AI upskilling cohort, completing an applied track in Software Engineering, LLMOps, and Prompt Engineering.
- Implemented a repeatable spec-generation process (consistent structure + review loop) to improve clarity and reduce ambiguity in requirement-to-design handoff – skills directly relevant to building robust, dependable systems.
- **Project:** Create an agentic workflow in Dify that converts user requirements into structured technical specifications through a generate → refine → review pipeline, producing implementation-ready project documents for software teams.

08/2019 – 05/2023 Bachelor of Arts

Colgate University – United States

- **Field of Study:** Computer Science
- **GPA:** 3.78 – Magna Cum Laude
- **Coursework aligned with secure systems and digital risk:** Intro to Cryptography; Security, Privacy and Society; Applied Machine Learning – foundation for computer systems + cybersecurity depth.
- **Term Project:** Built a machine-learning forecasting pipeline to predict US unemployment up to 12 months ahead, trained on 124 macroeconomic indicators across 612 months; compared multiple algorithms and selected models based on out-of-sample performance, with final results outperforming traditional industry benchmarks by up to 3 – 4 times in regards to prediction accuracy.

NETWORK/CIVIL SOCIETY ENGAGEMENT (APART FROM WORK EXPERIENCE)

Replace with dates (from - to)

BasicNeeds Vietnam

- **Main Responsibilities:** Diagnosed and fixed website issues (bugs, broken flows, usability friction) to make access smoother for donors/funders, patients, doctors, and the public; improved site stability and reduced user-facing failures.
- Helped to manage the NGO's database and implemented backend security controls to safeguard sensitive program and stakeholder data using role-based access, least-privilege permissions, and secure admin practices.
- Strengthened the platform's trust and availability to ensure that BasicNeeds can reliably serve and mobilize community mental health support, contributing to good health and well-being and reducing inequalities of vulnerable groups (people living with mental illness and epilepsy in Vietnam's poorest communities).

Brief description of network/civil society organisation BasicNeeds Vietnam is a Vietnam-based NGO (founded 2010) that advances a "leave no one behind" approach by strengthening sustainable, community-based mental health support—working with local health workers and community experts to expand access, reduce stigma, and build durable social support networks for underserved communities. Its community model has received international recognition, including the Zero Project Award 2019 at the United Nations in Vienna for an outstanding practice supporting Independent Living and Political Participation.

[Fill out separate entries for each engagement, if applicable. Start from the most recent. Remove any headings and entries left empty.]
